

Discover the convenience of never waiting for the kettle to boil or having to buy bottled water. Enjoy instant filtered steaming hot and cool drinking water from the same stylish tap.

Steaming Hot/Cool Schwan SC60

Perfect for coffee, tea, soups, noodles, blanching vegetables, food preparation and countless other uses...

So Convenient...

- Up to 60 cups an hour of steaming hot water, adjustable up to 98°C.*
*This is the maximum realistic temperature in the tank. The temperature at the tap will be less and will vary. Large drawoffs of hot water will reduce the temperature.
- High-clearance swivelling spout enables convenient filling of taller vessels.

So Safe...

- A child-safety button on the hot lever must be depressed before your Schwan will deliver steaming hot water, preventing accidental burns and making it safe when children are around.
- Non-drip dispenser: providing the temperature is set correctly, your Schwan tap should not drip, owing to an integral large expansion chamber.

So Efficient...

- Uses less energy than a 40 watt light-bulb—cheaper to run than boiling a jug!
- Quality stainless-steel tank means your Schwan will last!
- Insulated tank keeps water hotter for longer,
